

SHILLING BREWING Co.

SUSTAINABILITY

At Shilling Brewing Company we endeavour to cut waste and be as eco-friendly as possible therefore we:

- We use local suppliers where possible
- Showcase Scottish beer from local breweries
- Buy beer in reusable metal kegs where possible, and use reusable kegs for in house mini brews
- Recycle all our Glass, cardboard, food waste and dry mixed recyclables, including beer packaging
- We also send our spent grain to a farm to feed livestock* when pick up available
 - Careful stock management and holding practices has reduced our food waste to almost zero
 - Using refillable spray bottles
 - Turn off CO2 valves when not in use, we are also looking into ways of reducing our CO2 consumption in the brewing process
- Use low energy lightbulbs, we turn off lights everywhere when not in use, and have turned off extra equipment during slower business periods
- Reducing plastic use with recyclable straws only given when requested
- Maintaining equipment; all equipment is maintained to the best of our ability, and where possible will be repaired rather than replaced
